## Envidor

### Overview

#### Application Tips

#### Overview

- Group 23 acaricide
- Controls all economically important species of mites at all growth stages – egg, nymph and adult females
- New class of chemistry (tetrionic acids) and mode of action for resistance management
- Easy on beneficial insects, minor impact on beneficial mites
- High affinity for waxy surface provides extended residual activity
- Very stable in sunlight
- Active under a broad temperature range
- Easy-to-handle liquid formulation

Timing
Post-bloom only - typically 2-3 weeks after bloom

#### Application Tips

- Rainfast when dry
- After Envidor is applied, mites never emerge to next stage. Early life stages develop the fastest, therefore early applications result in faster control
- Re-entry period – 12 hours
- Do not make more than one application of Envidor per year
- Pre-harvest interval – 7 days in treefruit, 14 days in grapes
