

POLYRAM[®] DF Fungicide fruit technology sheet

Why choosing POLYRAM DF makes sense

POLYRAM DF provides proven broad-spectrum disease protection and improved fruit finish.

POLYRAM's unique patented formulation reduces dust and foaming during mixing, dissolves fast, and stays in suspension. As a result POLYRAM DF is easy to work with.

POLYRAM DF:

- The only EBDC registered for use on grapes

Compared to other EBDCs, POLYRAM DF's smaller particle size:

- Improves handling efficiency and safety
 - Will not clog sprayer nozzles
 - Creates less dust during mixing
 - Dissolves better and faster
 - Creates less foam
 - Eliminates the cost and time of anti-foaming agents
 - Stays in suspension longer
- Improves rainfastness:
 - Smaller particles stick to leaves better than larger particles

How POLYRAM DF works

POLYRAM is a non-systemic, preventative fungicide that forms a protective barrier on the plants surface. When fungi try to penetrate this barrier, POLYRAM DF stops amino acid production inside the fungal cells, stopping fungal growth.

What POLYRAM DF controls

Apples:

- Apple Scab
- Cedar Apple Rust
- Apple Quince Rust

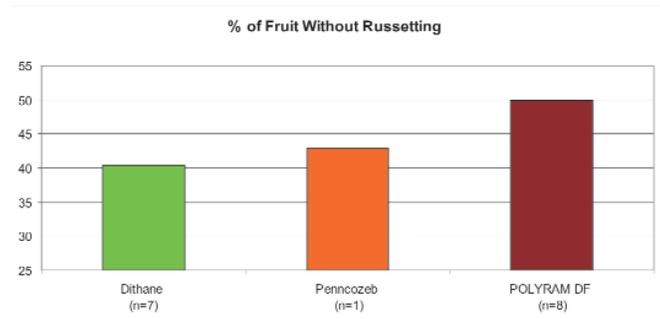

Grapes:

- Downy Mildew
- Black Rot

POLYRAM DF & Zinc

POLYRAM DF is the only fruit fungicide formulated with zinc for superior fruit finish.

Performance

Summary of BASF Research Trials.

Polyram[®] DF

When to apply POLYRAM DF

Crop	Disease	Rate	Timing
Apple	Scab	6.0 kg / ha	Apply in regular protective schedule from green tip up to and including second cover spray. Reduce rate to 4.5 kg/ha if scab pressure is low. PHI: 45 days
	Cedar Apple Rust		
	Apple Quince Rust		
Grape	Downy Mildew	2 kg / 1000 L of water	Apply in pre-bloom, post-bloom and first cover sprays. PHI: 45 days
	Black Rot		

Hollow-granule formulation

1.5 seconds later

2 seconds later

3 seconds later

POLYRAM DF's unique small, hollow-granule formulation creates less dust and foam while dissolving quickly and completely and staying in solution.

Technical Information

Fungicide Group: M²

Active Ingredient: Metiram

Interval: 5-10 days (See label)

PHI: 1 day

Formulation: Water dispersible granule

Packaging: 20 kg bag

Other registered crops

- Tomato
- Potato
- Asparagus
- Carrot
- Celery
- Sugar beet
