

MYKE® PRO POTATO • L

MYKE® PRO POTATO • L has been specially developed for potato production. This product is adapted to the equipment used and allows for a uniform distribution during the moistening of seed pieces or when it is applied in the furrow.

SIZE: 3.8 L (128 Us fl. oz)

DIRECTIONS FOR USE:

Seed piece treatment:

In a clean tank, pour the contents of a 3.8 L bottle in the volume of water required to treat the amount of seed pieces for 4 hectares (10 acres) of seedbed (around 150 000 seed pieces). Maintain under light agitation. Spray directly on the seed pieces before adding other products.

Application in the furrow at planting:

In the sprayer's tank, pour the contents of a 3.8 L bottle in the volume of water required to treat 4 hectares (10 acres) of seedbed. Refer to the chart. Maintain under light agitation during the application. Spray directly on seed pieces into the furrow.

Volume of water to add in the sprayer's tank according to the flow rate needed (per bottle of MYKE® PRO POTATO • L)			
FLOW RATE (l/ha)	WATER (l)	FLOW RATE (gal/ac)	WATER (gal)
47	190	5	50
57	230	6	60
66	265	7	70
76	300	8	80
85	340	9	90
95	380	10	100

ACTIVE INGREDIENT:

ENDOMYCORRHIZAL (AM) FUNGI	(spores/l)
<i>Glomus intraradices</i>	2 000 000

RECOMMENDATIONS

Do not use filters with openings smaller than 0.28 mm (50 mesh) to avoid clogging.

Use product within six hours following mixing in the tank.

STORAGE AND HANDLING

- Store in a cool place (2-8°C)
- Do not freeze product
- Shake well before use and during the application
- Respect the best before date on the label

Pesticide use:

Refer to the complete list of compatible pesticides on the website.
