

# ACROBAT® 50WP Fungicide potato technology sheet

## Why choosing ACROBAT makes sense

ACROBAT delivers excellent late blight control in potatoes and also suppresses tuber blight to protect potatoes in storage.

### ACROBAT:

- Stops in-field and field-to-field spread of late blight.
- Highly Systemic.
- Rapidly rainfast.
- Anti-Sporulant.

## How ACROBAT works

ACROBAT's systemic, anti-sporulant activity protects the plant by stopping fungal growth inside the leaves and stems and preventing re-infection. ACROBAT disrupts late blight cell walls, rupturing the cells and killing the spores. In the same way, ACROBAT protects the tubers from infection and reduces the development of tuber blight in storage.

## When to apply ACROBAT

- ACROBAT should be applied prior to the onset of late blight.
- Under heavy disease pressure, apply ACROBAT on a 5-7 day interval.
- Under light disease pressure, apply ACROBAT on a 7-10 day interval.

## Key Timings

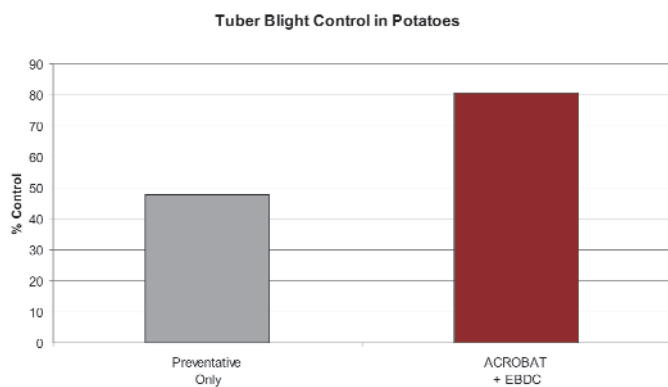

- Prior to row closure: This timing will optimize the protection of stems and foliage
- Cool, wet weather: These conditions may result in wash-off of contact fungicides.
- Stopping Disease Spread: Two ACROBAT applications 5-7 days apart will stop late blight dead.
- End-of-season: This timing will optimize tuber blight reduction.

## Application Tips

- Tank-mix ACROBAT with a protectant fungicide, such as POLYRAM® DF.
- Rate: 450 g/ha (180 g/ac).
- Pre-Harvest Interval: 4 days.
- Re-Entry Interval: 12 hours.

## Performance

Summary of BASF & 3rd Party Data (7)

## Technical Information

**Fungicide Group:** 40

**Active Ingredient:** Dimethomorph

**Rate:** 450 g/ha (180 g/ac)

1 jug treats 4 ha (10 ac)

**Interval:** 5-10 days

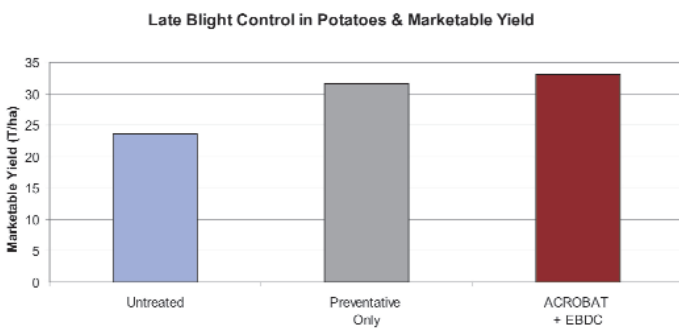

**Rainfast:** 3 hours

**REI:** 12 hours

**PHI:** 4 days

**Formulation:** Wettable powder

**Packaging:** 1 case consists of 8 x 1.8 kg jugs
