

CONQUEST LQ technology sheet

Why choosing CONQUEST LQ makes sense

CONQUEST® LQ offers premium weed control of tough broadleaf weeds and annual grasses in conventional and Identity Preserved soybeans. As a liquid formulation, CONQUEST LQ allows for easy handling and offers application rate flexibility to tailor early pre-plant, pre-plant incorporated or pre-emergence applications for specific weed pressures and soil types.

How CONQUEST LQ works

CONQUEST LQ combines the power of two modes of action from two proven products – PURSUIT® (Group 2) and Sencor® (Group 5) – in one convenient jug. CONQUEST LQ controls weeds through both soil and foliar uptake, controlling newly emerged weeds and keeping other weeds from germinating.

What crops can follow CONQUEST LQ in the rotation

Field corn	Spring barley	Winter wheat*
Soybeans	Spring wheat	

*Winter wheat may be grown 120 days after the application of CONQUEST LQ.

What CONQUEST LQ controls

CONQUEST LQ can be applied pre-plant or before crop emergence, providing season-long residual control of the following broadleaf and grass weeds.

Broadleaf weeds controlled	Common ragweed	Lady's-thumb
	Common lamb's-quarters	Redroot pigweed
	Eastern black nightshade	Velvetleaf*
Grassy weeds controlled	Green foxtail	

Ongoing research at BASF is showing that CONQUEST LQ provides control of the following additional weeds.

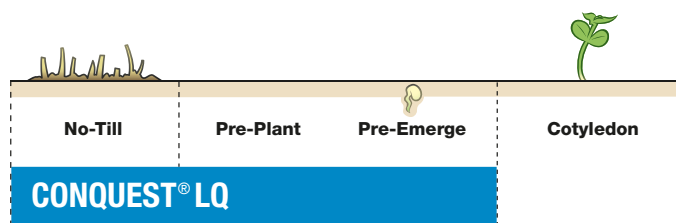

Additional weeds controlled	Wild mustard	Yellow foxtail
	Old witch grass	Barnyard grass

*Some velvetleaf plants that germinate deeper in the soil and emerge late may escape treatment.

When to apply CONQUEST LQ

Apply CONQUEST LQ either pre-plant incorporated or pre-emergence in soybeans. For weed control in reduced tillage or no-till systems, apply CONQUEST LQ as a tank-mix with a Roundup® branded herbicide before or after planting, but prior to crop emergence.

How much to apply

- A case of CONQUEST LQ will treat 30-40 acres.
- The 30-acre-per-case rate should be used in fields with heavier soils or higher weed infestations.
- Apply CONQUEST LQ and CONQUEST LQ tank-mixes with 10-20 gallons of water per acre.

Application tips

- Pre-emergence applications of CONQUEST LQ require sufficient moisture (to a depth of 5 cm) within 7 days of application for activation.
- Shallow cultivation (5-8 cm) should be used to control weeds until adequate precipitation is received.

For more information about CONQUEST LQ, call **AgSolutions®** by BASF at 1-877-371-BASF (2273) or visit agsolutions.ca
