

Maximize yield potential and profit

Green with Envy is a foliar plant nutrient blend that provides an economical way to reduce plant stress, improve plant growth and help your crops reach their full yield potential. For less than the cost of a bushel per acre, Green with Envy ensures that your crop has optimum nutrition when applied during that early growth stage.

Don't leave anything to chance. Use Green with Envy in a planned application schedule to maximize yields and net returns. Using Green with Envy is easy too. Apply it as part of your post-emergent herbicide, insecticide or fungicide applications during early stages of growth. You'll cut down on field trips while improving crop safety.

Green with Envy is the low-cost way to provide stress relief to crops—and to make every acre count.

Stress Relief

Relieve some stress in your life with a balanced blend of plant nutrients. Green with Envy relieves stress to allow your crop to reach its full genetic potential.

Make every acre count with Green with Envy. Call your nearest crop input dealer today.

Make EVERY Acre Count

United Agri Products Canada Ltd.

Look to UAP to supplement your nutrient requirements with Nortrace® Brand products. Green with Envy is a trusted Nortrace foliar nutrient blend with a balanced formulation of macro and micronutrients. UAP carries over 30 nutrient products, including single, blended and slow-release formulations, in addition to over 100 trusted crop protection products in the UAP product line in Canada. Green with Envy®

Stress Relief for your Crop

Make EVERY Acre Count

Reduce stress and capture full yield potential

Simply add Green with Envy® to most post-emergent crop protection treatments to improve resistance to stress caused by:

- Weather
- Herbicides
- Insects
- Diseases

Green with Envy ensures that crops have access to important nutrients during their critical growth stages. A scheduled Green with Envy application and/or a Nutriscription analysis is the best way to ensure nutrients are supplied to your crop during critical growth stages to help your crops reach their full genetic potential.

Convenient and simple to use

Green With Envy is a foliar plant nutrient blend in a liquid formulation that allows for easy mixing with most crop protection products.

Foliar fertilization for improved plant response

Crops

Registered on a wide range of field crops, vegetables, fruit, ornamentals and turf.

Forage Legumes – alfalfa, clover and trefoil

Corn – field, sweet and seed

Cereals – wheat, oats, barley, canary grass, and forage and seed grasses

Field Crops – soybean, canola, dry beans, chickpeas, flax, field peas, lentils and mustard

Cole Crops – kale, cabbage, cauliflower, Brussel sprouts, broccoli and rutabagas

Vegetables – lettuce, endive, celery, spinach, carrots, beans, onions, peas, potatoes, tomatoes, melons, squash, cucumbers and other vine vegetables

Fruit Crops – apples, strawberries, peaches, pears, cherries, raspberries, blackberries and grapes

Nursery and Ornamental Crops

Turf Grasses

Transplant and Irrigation solutions

Guaranteed Minimum Analysis

Total Nitrogen	16.0%
Total P ₂ O ₅	8.0%
K ₂ O	3.0%
Copper (Cu)	0.05%
Iron (Fe)	0.10%
Manganese (Mn)	0.05%
Zinc (Zn)	0.05%

Derived from Urea, Ammonia, Phosphoric Acid, Potassium Hydroxide, Copper EDTA, Iron HOEDTA, Manganese EDTA and Zinc EDTA.

Rate:

Apply Green with Envy at 1 - 2 L/acre in 5 - 20 gal/acre water to achieve good coverage of the foliage. Generally 1 L/acre for row crops and 1 - 2 L/acre for broadcast crops and vegetables.

See label for detailed rates and directions.

Tank Mixes:

May be mixed with most crop protection products (consult label and conduct jar test before mixing with crop protection products). May be mixed with other liquid fertilizers.

Timing:

Recommended application is in a tank-mix while applying other post-emergent products. Apply any time during vegetative growth of the crop. Larger foliage results in larger yield benefits from Green with Envy.
